

COMPUTER SECURITY AS A CLOUD SERVICE

Our fully managed service provides an easy and convenient way to protect all information stored on your organization's computers. Everything you need in a single service.

Why you need computer security

Most users store company information on their corporate laptops. If the laptop is lost, stolen or compromised by web-based threats, there is a risk that the proprietary information can be stolen or the laptop used to penetrate corporate networks and databases. A data breach can damage your reputation and result in fines, lawsuits and lost revenue.

Alertsec Total Endpoint Security

By using Alertsec Total Endpoint Security you ensure that all your organization's data is protected. With our service you can encrypt your laptops and USB sticks, detect and remove malware, protect computers from web-based threats and block unwanted traffic. There is no need to invest in multiple products, hardware or training - we handle everything for a fixed, monthly subscription.

Easy to manage

Web-based management and predefined best practice policies reduce the administration overhead to a minimum. Log in to your web account to manage all users and software applications.

Compliance and reporting

You are able to continuously monitor the security status of all your computers relative to your deployed policy, providing the information you need to be compliant with HIPAA, PCI and SOX requirements.

Comprehensive 24/7 support

The Alertsec helpdesk is always open for all users. Call or email us from anywhere, anytime. Our experienced engineers are standing by to assist all your users.

Powered by Check Point

Alertsec is powered by Check Point Endpoint Security products, which are positioned in the leader's quadrant in Gartner's Magic Quadrant for Mobile Data Protection. The implemented encryption has the highest security certifications - FIPS, Common Criteria and BITS.

Available software applications

- **Full Disk Encryption**
256-bit Full Disk Encryption to encrypt everything on a laptop. Only authorized users will be allowed access to the information.
- **Media Encryption / Port Control**
Provides encryption of removable storage media, USB sticks, CDs and DVDs. Port Control enables control of the activity on all computer ports (USB ports etc.) and includes centralized logging of port activity.
- **Anti-Malware / Program Control**
Efficiently detects and removes malware from the computer with a single scan. Program Control assures that only legitimate and approved programs are executed.
- **WebCheck**
Protects against the latest web-based threats including drive-by downloads, phishing sites and zero-day attacks. Browser sessions are run in a secure virtual environment.
- **Firewall**
Proactive protection for inbound and outbound traffic prevents malware from infecting your computers. The firewall blocks targeted attacks and stops unwanted traffic.
